Experience

Anelto

Software Engineer

Aug 22 - May22; Dec 23 - Current

- Provided maintenance and features for an AOSP tablet manufactured by the company
- Provided maintenance and support releases for iOS and Google Play store applications RemoteCare 24/7, LifeAssure, and Emergency Medical Alert
- Developed FOTA update processes for android applications in an AOSP environment
- Created new Android applications to manage text-to-speech and speech-to-text functionality
- Created User Interfaces for system applications and provided functionality
- Created and features and provided maintenance for Twilio video streaming applications
- Added functionality for medical devices using Bluetooth Low Energy controllers
- Managed HIPPA regulated data between local devices and server storage
- Worked with the manufacturing, distribution, and quality assurance teams to maintain products for customers
- Created pipelines in YAML in Bitbucket for app releases

Citigroup

Specialty Software Engineer

June 23 – Dec 23

- Provided maintenance and features for the Citi Mobile Banking Android application on the Google Play store
- Implemented the Kore AI library for conversational AI for Citibank's customer service portal
- Created new features for messaging activities
- Translated implementations for features from the Citi web application in Angular and Typescript to Android and Kotlin
- Worked with Jetpack Compose templates to create consistent user interfaces
- Worked with the Android container teams to provide support for release ready code with unit testing in Espresso

Cognizant

Associate Developer

Dec 21 – Aug 22

- Trained in Android mobile development from mobile development experts in a professional agile environment
- Created a social media application alongside iOS and web teams using sprint cycles and daily standups
- Implemented dependency injection with Dagger and Hilt to handle networking with Retrofit and data persistence with Room database
- Created a modern architecture implementation for our application using Model-View-View Model (MVVM)
- Created a solo Android app as a practice with Firebase tooling, cloud backends, and GPS/ Geofencing libraries
- Learned the fundamentals of launching an application on the Google Play store

Technical Skills

- Java, Kotlin
- Android Studio
- Android Open-Source Project (AOSP)
- XML Views, Compose
- Dagger/Hilt
- iOS Development, Xcode
- Swift, Swift UI
- Mobile Architecture (MVVM, MVC)
- Bluetooth, BLE
- SMS, TCP, HTTP
- JSON
- SQL
- Espresso
- Google Maps
- GPS, Geofencing
- Google Cloud, Places
- Firebase, Analytics
- JavaScript Frameworks (React, Angular)
- AWS
- Go
- Git
- Bitbucket, Gitlab, GitHub
- Jira, Confluence
- YAML
- Kore AI, Language Learning Models (LLM) and Large Data Models

Education

University of Texas at Arlington, BS Mathematics, 2021

Relevant Coursework: *Advanced Technical Physics, Advanced Calculus, Algorithms & Data Structures, Software Engineering, & Object-Oriented Programming*

Projects

Anton

An AOSP tabletop tablet designed to receive medical data from Bluetooth peripherals and provide secure video calling with family and medical professionals. I created several Android applications for the device including text-to-speech, speech-to-text functionality, Bluetooth peripheral controllers, and provide FOTA software updates to the device.

RemoteCareLive, LifeAssure

An Android and iOS application that is interconnected with the Anton ecosystem. This app allows video calling, messaging, and updates from an Anton device for family and doctors. I provide updates and maintenance for the app as well as manage the store listing for Google Play and Apple App Store.

Citi Banking App

I was part of a team assigned to add Kore AI conversational functionality to the help screen of the Android application. I implemented new features such as read receipts and activity alerts for ongoing chats.

Bodega

A native Android application utilizing retrofit, recyclerViews, google SSO, and material UI to provide an mock e-commerce experience

Georegistry

A location-based Android application for quickly registering users with a database by geographic location. Built with MVVM architecture, fragments, Material UI and animations, and firebase real time database and authentication.
